### **DETAILED ACTION**

1. Claims 1-47 are presented for examination.

### **Election/Restriction**

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-18, and 45-46, drawn to a system of cryptographic key maintenance for trusted platform, classified in class 380, subclass 276.
  - II. Claims 19, and 41, drawn to a system using the key storage and prevent performance of an authentication process, classified in class 713, subclass 155.
  - III. Claims 20-24, and 44, drawn to a system using memory for storing the root key, restore the logic, and interfacing the action of platform, classified in class 380, subclass 262.
  - IV. Claims 25-28, and 47, drawn to a system using the platform for backing up the stored key, classified in class 380, subclass 264.
  - V. Claims 29-31, and 42, drawn to a system for storing the root key, and copying the root key, classified in class 380, subclass 228.
  - VI. Claims 32-37, drawn to a method using key hierarchy, and controlling the subordinated platform, classified in class 380, subclass 44.
  - VII. Claims 38-40, and 43, drawn to a method for validating the trusted platform, classified in class 726, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I-VII are related as subcombinations disclosed as usable together in a

single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. Each subcombination has specific limitations and utilities that are not found in the other inventions. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

6. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
